Navneet Gupta

+91-7317567350 | indianavneetgupta33@gmail.com | Linkedin | Github | My Portfolio

Summary

Full Stack Developer with 6+ months of hands-on experience building data pipelines, REST APIs, and full-stack web applications. Automated preprocessing workflows for 3 ML datasets and integrated SQL/NoSQL databases using Python, SQL, and Java. Skilled in ETL workflows, RESTful API design, and machine learning model development on real-world datasets.

Technical Skills

Languages: Java, Python, SQL, JavaScript
Web & Backend: React.js, Node.js, Express.js, REST APIs, JWT Authentication
Databases: MongoDB, MySQL, PostgreSQL
Data & ML: Pandas, NumPy, TensorFlow, Scikit-Learn, ETL Workflows
Tools: Git, GitHub, VS Code, Agile/Scrum

Experience

MERN Stack Developer Intern Sep. 2025 – Dec. 2025
Codec Technologies Pvt. Ltd. *Remote*

- Developed and maintained 5+ full-stack modules using React.js, Node.js, Express.js, and MongoDB, improving data storage and retrieval efficiency by 20%
- Designed and implemented 10+ RESTful API endpoints handling structured data flow, authentication, and authorization using JWT
- Optimized database queries, reducing average application response time by 25% and improving system reliability
- Collaborated with a 4-member Agile team across 6 sprint cycles, participating in code reviews and sprint planning

Python & Machine Learning Intern Sep. 2024 – Nov. 2024
Softpro India Computer Technologies Pvt. Ltd. *Remote*

- Automated data preprocessing pipelines for 3 real-world datasets using Python, Pandas, and NumPy, cutting manual processing time by 30%
- Trained and evaluated 4 machine learning models with TensorFlow and Scikit-Learn, achieving up to 90% prediction accuracy
- Built 5+ Power BI dashboards to visualize processed data, enabling faster business decision-making for stakeholders
- Validated data quality with senior team members, reducing data inconsistencies by 15% across analysis workflows
- Earned an A++ grade (top performance rating) for outstanding internship contribution

Projects

Pneumonia Detection Using Chest X-Rays | *Python, TensorFlow, Keras, OpenCV, CNN* GitHub

- Engineered an end-to-end data pipeline for medical image classification using CNNs, processing 5,000+ chest X-ray images across ingestion, preprocessing, augmentation, and training stages
- Achieved reliable pneumonia detection accuracy by applying data cleaning and normalization techniques to handle inconsistent image quality
- Structured the pipeline into 4 modular, reusable stages to support fast retraining on updated datasets

E-Commerce Platform | *React.js, Node.js, Express.js, MongoDB* GitHub

- Architected a full-stack e-commerce application with REST APIs integrated to MongoDB, supporting scalable product, order, and user data storage
- Implemented JWT authentication and secure access controls, protecting user and order data across all endpoints
- Normalized database schemas across 3 core entities (products, orders, users) to ensure data consistency and efficient querying

Education

Accurate Institute of Management and Technology (AKTU) Greater Noida, India
Bachelor of Technology in Computer Science and Engineering *Oct. 2023 – Aug. 2027*

Certifications

AICTE & ICAC Approved MERN Stack Development Certification | Deloitte Australia Data Analytics Job Simulation Data Science Certification | Python Programming Certification | C Programming Certification | Full Stack Development Internship (Bharat Intern)
